

Baselines and Progress Reporting

Designed to explain the process of adding baselines to programmes, setting up progress reporting periods, recording progress effectively, and comparing progress completed against planned.

Our online training course is designed for intermediate level Powerproject users seeking to advance their skills in baselines and progress reporting using both straight and jagged line methods. Our comprehensive program covers the latest techniques and best practices for effective utilisation of these methods in your projects.

Our expert trainers will guide participants through a dynamic and interactive learning experience that includes practical exercises, demonstrations, and discussions. The course content can also be customised to meet your company's unique progress reporting and as-built recording procedures, ensuring that you get the most out of the program.

By the end of the course, delegates will have the practical skills and knowledge to efficiently and effectively monitor project progress, make informed decisions, and deliver successful projects. This course is essential for Project Managers, Site Managers, and Assistant Site Managers who are seeking to enhance their productivity and efficiency while using Powerproject.

Adding a baseline to an existing programme.

Creating progress entry periods (reoccurring and one-off).

Updating progress at a specific date point.

Showing multiple progress lines on the programme bar chart.

Rescheduling the programme to show a straight line and revised completion date.

Displaying a jagged line report of progress completed.

Showing progress against only critical path items.

Comparing planned vs actual progress completed.

Adding progress columns and formatting the table.
